

# Glutton Bellows - The Heavy-Duty, Low Maintenance Solution

The Glutton pump features a bellows seal design that replaces the throat seal and packings in traditional piston pumps, virtually eliminating the possibility of air or moisture contaminating the fluid. Known for its robust design, the Glutton pump is the ideal choice when no other pump can handle the job.

## Applications

- Air spray and HVLP supply
- Circulating systems
- Catalyzed coatings
- Varnish and lacquer
- High solid coatings
- Abrasive materials
- Solventborne and waterborne fluids
- Moisture sensitive materials
- UV-cure coatings
- Flat line machine lines
- General Finishing applications where open wet cups are not preferred

## Compact Design

1. Easy Maintenance
  - Vertical ball check design with reversible seats for uniform wear and long service life
  - External check allows for quick maintenance for materials that pack or mat out easily
2. External Air Valve
  - Easy installation access and maintenance with smooth change overs due to slow release metered vent
3. Pump Stand
  - Included for easy mounting
4. Outlet Manifold
  - Simplifies plumbing and installation
5. Cylinder and Displacement Rod
  - Designed to handle a broad range of coatings
6. Piston Seal Configurations
  - Multiple piston seal configurations for material compatibility
7. Improved Bellows Seal (optional)
  - Improved seal design for longer life in abrasive applications
8. Carbide Seat Accessory
  - Ideal for abrasive materials
